

Kenneth Salvi

Director, Information Services

Ken Salvi started his professional career with Xerox Corporation in 1982 as a Systems Engineer. In that role, he was responsible for the design and project management of production laser printing systems being installed into the large data center environment. That beginning was the launch pad for Ken's 27 years of experience with Information Technology. From there, Ken followed the shift in information technology from the data center to the personal computer and client-server networking. Ken also moved from roles in engineering to sales and sales management. In 1992 Ken became the Director of Public Sector Group for Entex Information Services and was responsible for state and local government sales nationally. He then moved to a government sales role in the voice environment for Siemens and on into the emergence of voice

over IP solutions. In 1998, Ken became a multi-service networking, IP Telephony Specialist with Cisco Systems. Through these positions Ken acquired significant expertise in design, implementation, sales, sales management and support of a wide range of information technology.

Ken joined InterWest from Cisco Systems in June of 2003. Since then, he has been responsible for the consolidation of multiple data and voice environments into one multi-services solution. Ken is currently responsible for all aspects of InterWest's Information Services environment including applications, network operations, data center management, security, telephony, messaging, desktop and the internet.
